

```
package com.observer.improve;

public class BaiduSite implements Observer {

    // 温度, 气压, 湿度
    private float temperature;
    private float pressure;
    private float humidity;

    // 更新 天气情况, 是由 WeatherData 来调用, 我使用推送模式
    public void update(float temperature, float pressure, float humidity) {
        this.temperature = temperature;
        this.pressure = pressure;
        this.humidity = humidity;
        display();
    }

    // 显示
    public void display() {
        System.out.println("===百度网站===");
        System.out.println("***百度网站 气温: " + temperature + "***");
        System.out.println("***百度网站 气压: " + pressure + "***");
        System.out.println("***百度网站 湿度: " + humidity + "***");
    }

}
```
