

```
package com.composite;

public class Department extends OrganizationComponent {

    //没有集合

    public Department(String name, String des) {
        super(name, des);
        // TODO Auto-generated constructor stub
    }

    //add , remove 就不用写了, 因为他是叶子节点

    @Override
    public String getName() {
        // TODO Auto-generated method stub
        return super.getName();
    }

    @Override
    public String getDes() {
        // TODO Auto-generated method stub
        return super.getDes();
    }

    @Override
    protected void print() {
        // TODO Auto-generated method stub
        System.out.println(getName());
    }

}
```
