

```

package com.sxt.templateMethod;

public class Client {
    public static void main(String[] args) {
        BankTemplateMethod btm=new DrawMoney();
        btm.process();

        //采用匿名内部类
        BankTemplateMethod btm2=new BankTemplateMethod() {

            @Override
            public void transact() {
                System.err.println("我要存钱!!");
            }

        };

        btm2.process();

    }
}

class DrawMoney extends BankTemplateMethod{

    @Override
    public void transact() {
        System.err.println("我要取款!!");
    }

}

```
