```
package com.proxy.staticproxy;

//代理对象,静态代理
public class TeacherDaoProxy implements ITeacherDao{
    private ITeacherDao target; // 目标对象,通过接口来聚合

//构造器
    public TeacherDaoProxy(ITeacherDao target) {
        this.target = target;
    }

@Override
    public void teach() {
        // TODO Auto-generated method stub
        System.out.println("开始代理 完成某些操作。。。。。。");//方法
        target.teach();
        System.out.println("提交。。。。。。");//方法
    }
```
