```
package com. sxt. mementor;
public class Client {
     public static void main(String[] args) {
                CareTaker taker=new CareTaker();
                Emp emp=new Emp("紅一", 18, 900);
                System.err.println(emp.getEname()+"---"+emp.getAge()+"---
"+emp.getSalary());
                taker.setMementor(emp.mementor()); //备忘一次
                emp. setAge(38);
                emp.setEname("江二");
                emp. setSalary (1000);
                System.err.println(emp.getEname()+"---"+emp.getAge()+"---
"+emp.getSalary());
                emp.recovery(taker.getMementor());
                System.err.println(emp.getEname()+"---"+emp.getAge()+"---
"+emp.getSalary());
}
```
