```java
package com.observer.improve;

public class CurrentConditions implements Observer {

    // 温度，气压，湿度
    private float temperature;
    private float pressure;
    private float humidity;

    // 更新 天气情况，是由 WeatherData 来调用，我使用推送模式
    public void update(float temperature, float pressure, float humidity) {
        this.temperature = temperature;
        this.pressure = pressure;
        this.humidity = humidity;
        display();
    }

    // 显示
    public void display() {
        System.out.println("***Today mTemperature: " + temperature + "***");
        System.out.println("***Today mPressure: " + pressure + "***");
        System.out.println("***Today mHumidity: " + humidity + "***");
    }
}
```
